### 📄 PROFILE

Hi, I'm Robert, a Fullstack Software Developer and DevOps Engineer with a Master's degree in Computer Science. I've worked across startups and enterprise environments, building and deploying scalable web applications using stacks like Next.js, Flask and FastAPI in combination with modern technologies such as Docker, Gitlab CI, Kubernetes, AWS, Neon and Vercel.

### 📁 PROFESSIONAL EXPERIENCE

#### ECO2GROW GmbH

Fullstack Software Developer & DevOps Engineer

06/2024 – present | Remote

- Built and deployed a scalable Next.js and Flask application for managing B2B energy portfolios, running on AWS and containerized via Docker
- Designed CI/CD pipelines using GitLab, enabling automated testing, static code analysis, and seamless deployments
- Implemented end-to-end testing to ensure reliability and regression safety across microservices
- Reduced manual deployment efforts through pipeline automation and IaC configuration
- Migrated backend services to FastAPI deployed on Railway, improving API response times and simplifying container orchestration
- Deployed Next.js frontends on Vercel with preview environments, enabling faster iteration and zero-downtime releases
- Orchestrated event-driven and background workflows with Inngest, ensuring reliable async processing and automatic retries
- Provisioned serverless Postgres databases on Neon with branching, streamlining development, testing, and schema migrations
- Integrated StackIT cloud services for client-facing deployments, configuring secure API access and infrastructure provisioning
- Built LLM response parsing pipelines to extract and validate structured data from model outputs, improving reliability of downstream automation

#### T.CON GmbH & Co. KG

Fullstack Software Developer

10/2023 – 05/2024 | Plattling, Germany

- Developed and maintained SAP Fiori applications on SAP BTP using Node.js, Express, and SAP's Cloud Application Programming Model (CAP)
- Created frontends using SAP UI5 in JavaScript, tailored to manufacturing and logistics use cases
- Built and optimized backend services interacting with HANA databases for real-time data retrieval
- Automated unit and integration tests using Cypress
- Collaborated in agile teams with SAP consultants to deliver continuous improvements

#### BMW AG

Master's Student

03/2023 – 08/2023 | Landshut, Germany

- Led a cybersecurity initiative to revise and implement internal IT security standards for OT systems
- Managed planning and execution of IT security audits, improving compliance and process transparency
- Designed and launched a company-wide training program to boost cyber security awareness among engineers

## SKILLS

### Fullstack Development

- JavaScript/TypeScript/Python/Bash
- Node.js/Next.js/Flask/FastAPI

### Cloud & DevOps

- Docker & Docker Compose, Kubernetes, AWS, Hetzner, Railway, Vercel, Neon
- GitLab CI/CD, IaC

### Networking & Self-Hosting

Reverse proxies (Nginx/Traefik), VPN tunneling, home-lab infrastructure

### Linux

CLI, shell scripting, Docker-based workflows

- Conducted benchmark analysis of OT security practices across BMW production sites

### Orange Cyberdefense Germany GmbH

Security Operations Center Specialist

08/2022 – 01/2023 | Augsburg, Germany

- Monitored system and sensor states daily through CLI tools and web interfaces
- Installed and updated sensors remotely, contributing to a decrease in support tickets
- Supported the maintenance and performance optimization of an internal Kubernetes cluster

### DioVision Systems GmbH

Fullstack Software Developer & DevOps Engineer

10/2019 – 06/2021 | Regenstauf, Germany

- Designed backend architecture and APIs for industrial automation software using Typescript and OPC UA protocols
- Developed and maintained modular software components for real-time process monitoring
- Wrote automated unit tests and integrated CI pipelines to improve code quality and stability
- Supported deployment and on-site configuration of software at client manufacturing facilities

## PROJECTS

### Stock Screener – SaaS

<https://stock-screener.app>

- Fullstack SaaS with Next.js on Vercel: Stripe payments, Clerk auth, Neon Postgres + Drizzle, Cypress E2E tests
- Python stock scraper running as cronjob on a self-managed server

### Portfolio Website

<https://robertfent.com>

- Built website with Node.js, htmx, SQLite and playwright unit tests on a self-managed server

### Self-Hosted Home Server

- Media server with ~20 Docker Compose services on Linux
- Traefik reverse proxy with automated TLS, dynamic DNS, and remote access via VPN tunnel (Headscale/Tailscale) over a Hetzner server

## EDUCATION

### M.Sc. Computer Science

OTH Regensburg

2021 – 2023

### B.A. Media Informatics

University of Regensburg

2017 – 2021
